

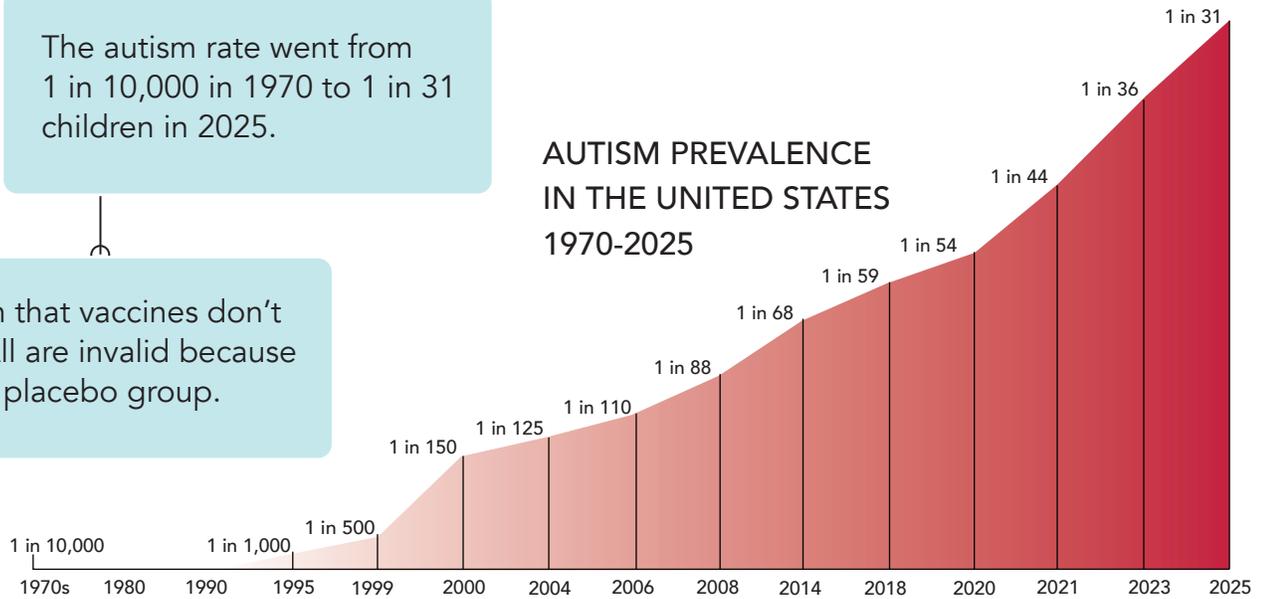

Mapping the Entire Field of Autism Causation Studies

The 1986 National Childhood Vaccine Injury Act gave vaccine makers liability protection.

The vaccine schedule increased from 7 shots to 76 shots over the next three decades.

The autism rate went from 1 in 10,000 in 1970 to 1 in 31 children in 2025.

AUTISM PREVALENCE IN THE UNITED STATES 1970-2025

22 studies claim that vaccines don't cause autism. All are invalid because they lack a true placebo group.

5 large gene studies AGRE | SSC | ASC | MSSNG | SPARK
Over two billion dollars spent and almost nothing to show for it because there's no such thing as a genetic epidemic.

4 large epigenetic (genes and environment) studies CHARGE | MARBLES | SEED | EARLI
They are all unreliable because they didn't control for vaccines.

Ozonoff et al. 2018 is the key. Up to 88% of autism cases are characterized by sudden regression. This suggests an acute toxic exposure. We have eyewitness testimony from thousands of parents that the acute toxic exposure was vaccines.

6 vaccinated vs. unvaccinated studies

- Gallagher & Goodman (2008) OR = 8.63
- Gallagher & Goodman (2010) OR = 3.002
- Mawson et al. (2017a) OR = 4.2
- Mawson et al. (2017b) premies OR = 14.5
- Hooker & Miller (2021) OR = 5.03
- vaccinated & not breastfed OR = 12.5
- vaccinated & c-section OR = 18.7
- Mawson & Jacob (2025) OR = 4.4

Remove liability protection for vaccine manufacturers and the autism epidemic ends.
